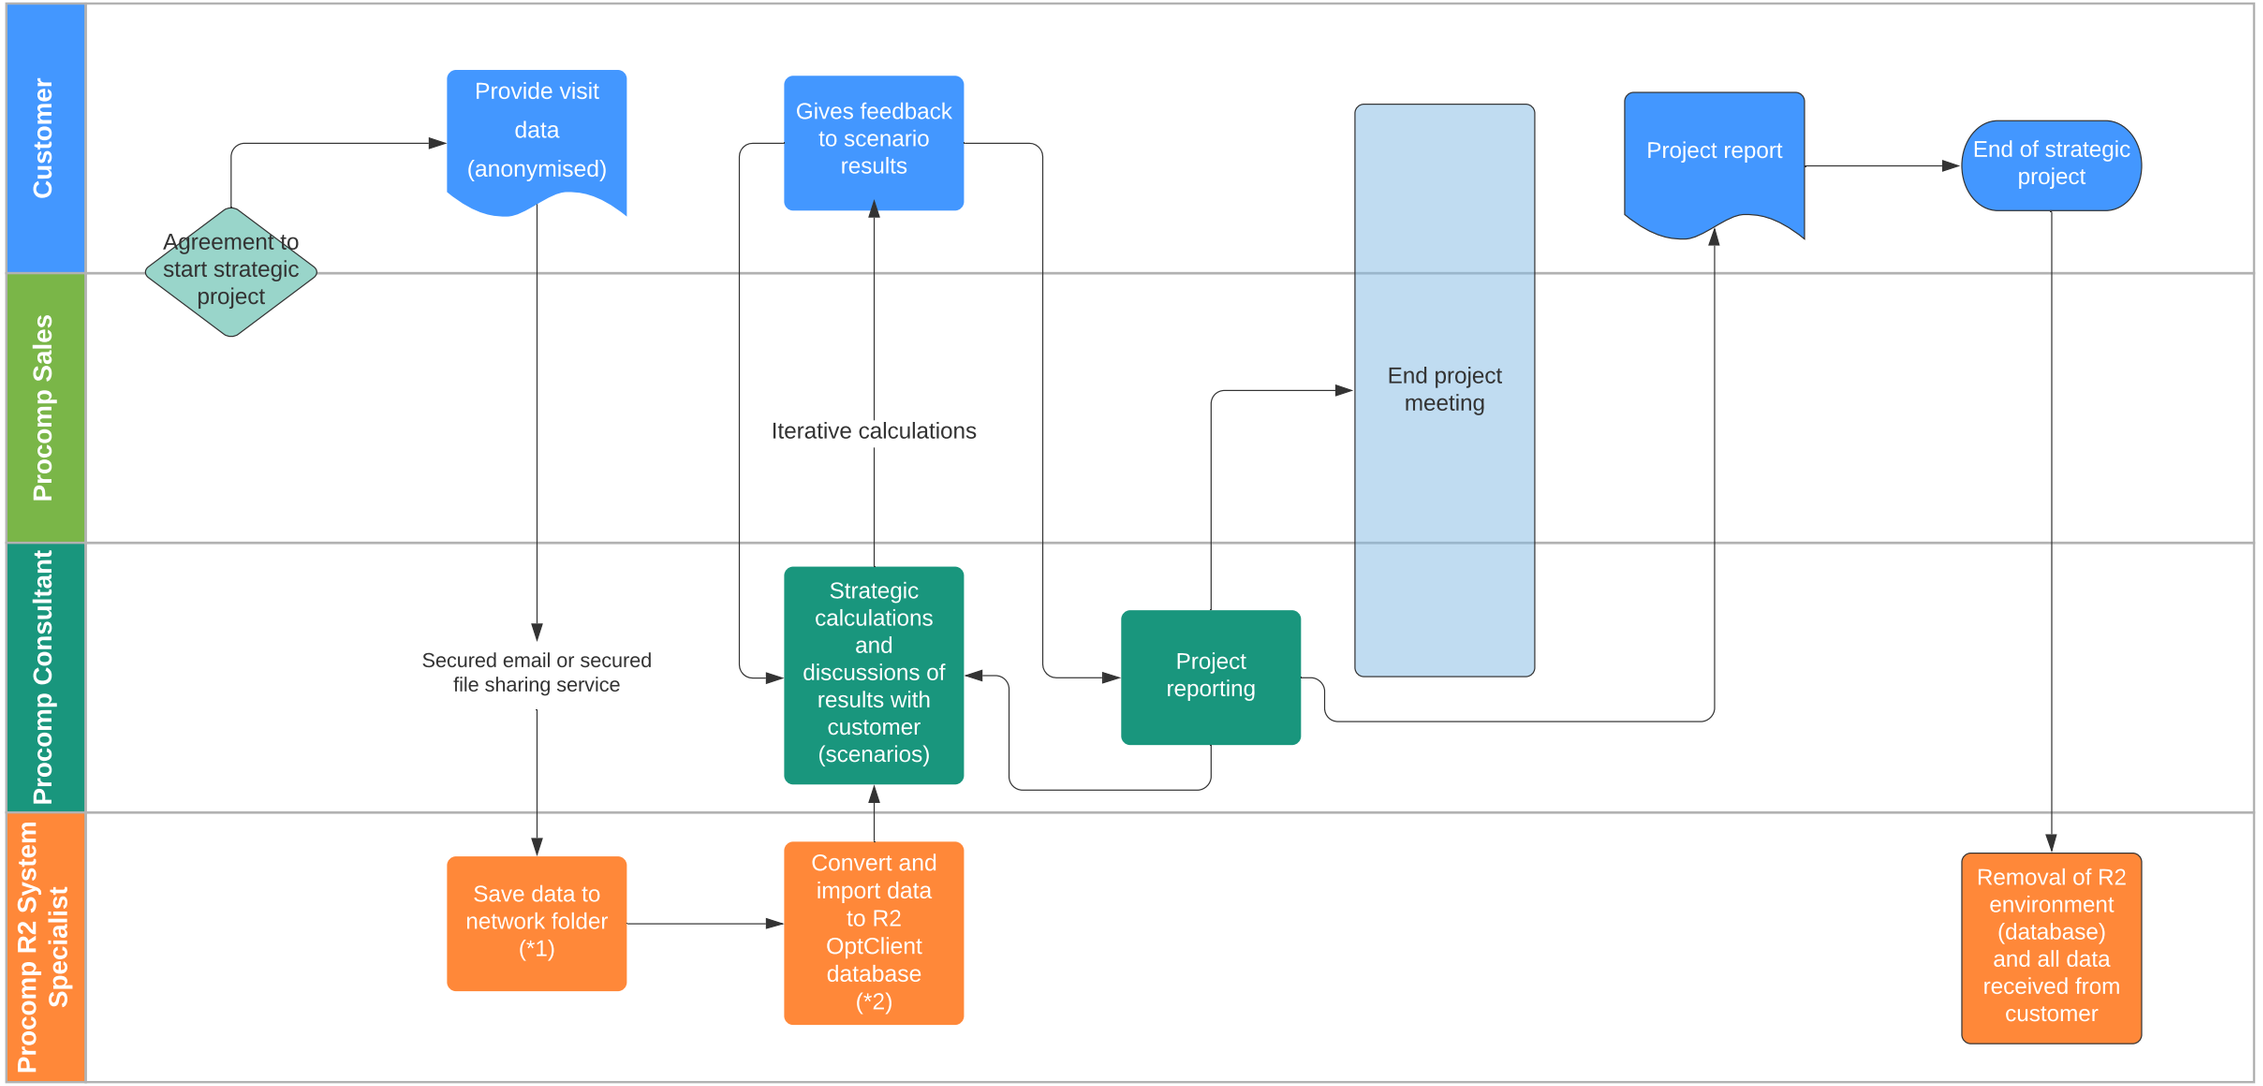
Strategic project, handling of data

Juha Arola | September 3, 2021



*1 Data is saved to Procomps Solutions network folder. Access to data is allowed only for persons needed in project.
*2 Data is converted to format that R2 OptClient requires by a System Specialist. All work files are stored and kept in Procomp's network drive. Converted data is then imported to a Client dedicated R2 OptClient database for strategic scenario optimisations.
*3 Project documentation does not include any personal data from visit data.
